

ABSTRACT

5 A water purifying apparatus includes a tubular portion (4) having an inlet (11)
for receiving water and an outlet (12) for emitting the water, and a nozzle portion (5)
disposed inside the tubular portion (4) to allow the water flowing through the tubular
portion (4) to pass therethrough. The nozzle portion (5) has a nozzle opening (10) for
discharging the water toward the outlet (12). The tubular portion (4) is provided with
air supply means for mixing air taken in from outside the tubular portion (4) with the
water discharged from the nozzle opening (10). The nozzle opening (10) has a shape
10 defined by one line segment or a combination of a plurality of line segments.
